

# **Trina photovoltaic panel size standards**

## Overview

---

Trina Solar proposed that dimensions of 2384\*1134mm be adopted as a universal industry standard, a suggestion that was agreed upon by the the association and participating companies. Is a Trina Solar PV module ul1703 compliant?

The fire rating of a Trina Solar PV module is valid only when mounted in the manner specified in the mechanical mounting instructions of this installation manual. The module is considered to be in compliance with UL1703 only when the module is mounted in the manner specified by the mounting instructions below.

What temperature should Trina Solar modules be installed in?

Trina Solar recommends that the module should be installed in a working environment with an ambient temperature of -20°C to 50°C, but not exceed the temperature limit of -40°C to 85°C. The modules shall be installed in shadow-free areas throughout the year. Do not install the PV modules at a place where water damage may occur.

How do you protect a Trina Solar PV module?

Cover the front surface of modules by an opaque material when repairing. Modules when exposed to sunlight generate high voltage and are dangerous. Trina Solar PV modules are equipped with bypass diodes in the junction box. This minimizes module heating and current losses.

Are Trina Solar solar modules corrosive?

Salt spray corrosion tests conducted in accordance with IEC 61701 have shown that Trina Solar's PV modules can be installed near offshore or in the corrosive environment. However, the modules shall not be immersed in water or in a permanently wet environment (e.g., fountains, spindrift, etc.).

What voltages can Trina Solar modules operate at?

Trina Solar modules are certified for operating in Application Class A installations at voltages below 1000V DC (For TSM-PE05A.\*\*, PE14A.\*\*, below 1500V DC).

Can Trina Solar modules be installed in landscape or portrait orientation?

**SITE SELECTION** Trina Solar Modules can be mounted in landscape or portrait orientation however the impact of dirt shading the solar cells can be minimized by orienting the product in landscape. Solar module is recommended to be installed at an optimized tilt angle to maximize the energy output.
