

True or false of Chint's photovoltaic panel installation

Overview

What is a solar photovoltaic system?

Solar photovoltaic (PV) systems use solar panels to directly convert sunlight into electricity. These panels contain photovoltaic cells that absorb sunlight and release electrons, generating an electrical current. The electricity produced can be used to power homes, businesses, and even entire communities.

Why do people worry about solar panels?

Some are put off by uncertainty about costs, others believe the installation will be disruptive and many worry that solar panels will be tricky to maintain. These were among the most common questions and concerns people had about getting solar panels, according to a government report in July 2021.

Can solar panels be installed on a roof?

Your installers will usually need to erect scaffolding to install solar panels on your roof. Once this is up, solar panels can be installed in a day or two. The inverter will usually be fitted in either a loft or garage. This converts the DC your panels produce to AC that you can use in your home.

Can solar panels be installed on blocks of flats?

Solar panels can be installed on blocks of flats, but this is often done by the landlord or freeholder. If you and your neighbours are keen, speak to the landlord or managing agent. If you live in a listed building, a conservation area or World Heritage Site, or other designated area, you may need planning permission for solar panels.
