When to Turn Off Your Lights

To calculate the exact value of energy savings by turning a lightbulb off, you need to first determine how much energy the bulb consumes when on. Every bulb has a watt rating printed on it. For example, if the rating is 40 watts, and the bulb is on for one hour, it will consume 0.04 kWh, or if it is off for one hour, you will be saving 0.04 kWh.

Power MOSFET Basics: Understanding the Turn-On Process

But during turn-on, system designers can, and should, ignore it altogether. Another curve given on the datasheet refers to the MOSFET turning on with increasing gate voltage - the transfer characteristics. This is illustrated for the same SiR826ADP device in DS
