

Understand photovoltaic panels for solar roof

Overview

What is a solar roof system?

The system is made up of individual panels mounted onto the roof which sit on top of your existing tiles or other roof finish. This solar roofing system is proven and widely available, but the main downside is the aesthetics. With an on-roof system, the panels are clearly added on as an afterthought and are not integrated into your home.

What is on-roof solar roofing?

On-roof solar panels make up the most widely recognisable solar roofing system in the UK. The system is made up of individual panels mounted onto the roof which sit on top of your existing tiles or other roof finish. This solar roofing system is proven and widely available, but the main downside is the aesthetics.

How do solar panels work on a flat roof?

Solar panels work best when angled towards the sun, so panels on flat roofs are normally tilted up to help maximise energy production. It's important that any solar panel system maintains the integrity of the roof covering to keep it watertight. For this reason, many systems are weighted down rather than fixed through the roof covering.

Can solar panels be installed on a roof?

"The solar panels will need to be mounted on the roof by installers who understand roofing and will need some scaffold decks to safely get the panels to the roof.

How do roof-integrated solar panels work?

Technically, roof-integrated solar panels function just like traditional solar panels or solar roof tiles, using photovoltaic cells to convert sunlight into electricity. However, instead of sitting on top of the roof on visible brackets

that can affect your home's aesthetic appeal, they become a part of the roof structure itself.
