

Use small solar energy to generate electricity at home

Overview

Should you use solar power to generate electricity at home?

Using solar power to generate electricity at home is a very appealing option for a number of reasons: not only would you be reducing your overall environmental footprint and greenhouse gas emissions, but you would be reducing your bills and could even generate some income by selling back excess energy into the grid.

What types of solar power can you install at home?

There are two main types of solar power that you can install at home: solar PV panels and solar water heaters. Solar PV uses solar cells to transform the energy from the sun to electricity that you can use to power the appliances in your home.

Is solar power the cheapest way to generate electricity?

If you are looking into options for making your house more eco-friendly and saving some money, solar power is probably one of the most attractive renewable energy options. In fact, solar power is becoming the cheapest way to generate electricity, according to Bloomberg New Energy Finance analysts.

What are solar electricity panels?

Solar electricity panels, also known as photovoltaics (PV), convert the energy from the sun's rays into electricity that can be used within your home using photovoltaic cells. These cells are grouped together to form modules.

Can I use my solar panels if I'm not at home?

Additionally, even though your solar panels will generate electricity, it is unlikely to all be used by yourself. The sun is obviously only out during the day, so if you are not at home, it will be fed into the grid so that it can be used by somebody else.

How can you generate electricity at home?

The main forms of renewable electricity available are solar, wind, biomass, and hydroelectric power. All are in theory available to install at home, although some are more viable than others (you might have trouble building a hydroelectric dam in your garden).
