

# Utility scale ESS supplier quotation in Ireland 2030

## Overview

---

What is the ESS policy?

The policy outlines a comprehensive approach to the development of ESS in Ireland. This framework seeks to enhance regulatory and market structures, provides targeted incentives and sets technical standards to support the deployment of these storage solutions.

What is the electricity storage policy framework for Ireland?

The Electricity Storage Policy Framework for Ireland This is a strategic initiative aimed at transforming Ireland's energy infrastructure. As the use of renewable energy sources increases, so too does the challenge of managing the intermittent nature of these energy sources and ensuring that a stable energy infrastructure is in place.

Is ESS based on SoEF 2023?

The 2030 ESS assumptions are based primarily on SOEF 2023, as this provides the most granular regional and duration split between ESS in 2030. The GCS 2023 is limited to Capacity Auction results that run to 2027 and assumes a flat line of growth from then onwards, which most likely underestimates the 2030 assumptions.

How much power will Ireland's battery storage fleet produce?

If these predictions materialize, the battery storage fleet across Ireland and Northern Ireland will have a power output of 5 GW up from the currently installed 1 GW. To continue reading, visit our ESS News website. This content is protected by copyright and may not be reused.

Do network charges reflect the costs and benefits of ESS?

Ensuring that network charges reflect the costs and benefits ESS offer to the Irish transmission network is therefore a core area of focus for Energy Storage Ireland (ESI). ESI have commissioned Economic Consulting Associates Ltd

(ECA) to undertake a review of the network charging arrangements in both ROI and NI and their impact on energy storage.

Should ESS be used as a demand?

This is particularly the case in ROI where the treatment of ESS as a demand exposes operators to a much broader cost base than generators, including non-cost reflective volumetric charges that will distort trading decisions.
