

Vagabond lithium battery

Overview

What is Vagabond mini lithium?

The Vagabond Mini™ Lithium is a third generation controlled-current pure sine wave power source for operating a.c. powered studio flash units in the field from its built-in battery. Both small and lightweight, the Vagabond Mini™ Lithium is designed to operate up to four Paul C. Buff™ self-contained flash units.

What kind of battery does the Vagabond mini use?

But let's start at the beginning. The Vagabond Mini is a lithium battery. But unlike brand-specific batteries that you use by setting your unit to DC power, the Mini uses an inverter to convert the power into 120VAC power. No need for specific battery to flash unit power cord here, just take your AC power cord and plug it right into the Mini.

How many flash units can a vagabond mini run?

Both small and lightweight, the Vagabond Mini™ Lithium is designed to operate up to four Paul C. Buff™ self-contained flash units. (For Vagabond Mini's, or spare batteries, shipped prior to 9/4/2018 download travel documents here). **As of 3/26/21, ALL batteries are no longer eligible for the 30-Day Satisfaction Guarantee.

How much does a vagabond mini cost?

Note: The Vagabond Mini is also available as a 230VAC model. You can purchase both models directly from Paul C. Buff in Nashville, Tennessee. Retail price is \$239.95. For more information, contact Paul C. Buff, Inc. at: .

How much does the buff Vagabond weigh?

To give you an idea of how much things have changed, the original Buff Vagabond weighs in at 18.5 lbs whereas the Mini is only 3.5 lbs and about a fifth of the size. And if you think you're sacrificing performance for size, take a

look at the spec sheet. The unit has two outlets; two more can be added via a power strip.
