

# **Voltage requirements for photovoltaic panel installation**

## Overview

---

What are the requirements for photovoltaic (PV) generators?

Requirements for Photovoltaic (PV) Generators (currently in development by IEC TC 82) - will set out general installation and safety requirements for the PV equipment. The Scope of Section 712 in BS 7671:2008 includes PV power supply systems including systems with a.c. modules but, currently, excludes any form of battery storage.

What are the requirements for a PV installation?

Virtually all domestic PV installations will fall under the scope of Part P. Part P requires the relevant Building Control department to be notified and approve the work. There are two routes to comply with the requirements of Part P: Notify the relevant Building Control department before starting the work.

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a “post” and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

Do electricians need a PV system?

So much so, it seems likely that most electricians who undertake domestic work will at some point encounter an electrical installation that has a PV system connected to it. In such circumstances, the risks associated with an installation that is connected to an additional supply source must be recognised.

Can a PV system be electrically installed?

Guidance exists for electrical installation of PV systems[15, 16, 17] but there is little equivalent guidance for mechanical installation.

What are the requirements for solar panel installation?

mediate enforcement action by HSE inspectors • Solar panel installation is not short duration work and will need scaffolding or similar equipment. • It should have a boarded working platform and full edge protection (double guard-rails and toe-boards) to stop people and tools from falling. Debris netting may also be necessary to prevent materials
