

# **What does the bidding requirements for energy storage cabinets mean**

## Overview

---

Should energy storage schemes get planning permission?

The change in the law should make it much easier for energy storage schemes to get planning permission, to attract funding more easily, and enable them to be built more quickly. The recent UK Battery Storage Project Database Report by suggested the UK has more than 13.5GW of battery storage projects in the pipeline.

What are the changes to planning legislation for energy storage projects?

The changes to planning legislation for larger energy storage projects were first announced back in October 2019 to allow planning applications to be determined without going through the Nationally Significant Infrastructure Project (NSIP) process.

What are the safety requirements for energy storage technologies?

**Safety:** Minimum safety and operating requirements are common considerations for energy projects. Energy storage resources present additional safety concerns given their unique technological profiles. For battery storage technologies in particular, safety requirements should adequately address fire risks.

How long does it take to plan an electricity storage project?

It means that most electricity storage projects, with the exception of pumped hydro schemes, can be determined through the Town and Country Planning Act, by local planning authorities. In effect this means that planning applications for projects over 50MW should, theoretically, be decided in between eight and 13 weeks depending on their size.

What are the operational limitations of energy storage?

**Operating Limitations:** Energy storage resources may be subject to operational constraints that do not affect traditional generation projects. For

example, certain battery technologies will degrade more quickly if the state of charge is not actively managed within a certain range.

What is electricity storage?

Electricity storage covers a range of technologies that can deploy at different scales and provide output for different durations. This includes lithium-ion battery storage and pumped hydro storage as well as emerging technologies including liquid air energy storage and flow batteries.
