## Overview

---

Do-it-yourselfers build wind power generators almost exclusively with Permanent Magnet Motors, because they are widely available, reliable because of the nature of their construction, and start generating electricity at almost any RPM. The same cannot be said of some of other types of motors. Inside a permanent.

The Volts-to-RPM Ratio is one of the most important specifications to look out for in selecting your motor. Most DIYers use their motor to charge a 12-Volt battery, because of their cost and widespread availability. Charging a 12.

The next item is the amperage rating of the motor. This provides information regarding how much current the motor will put out as a generator.
