Overview

In the evening sky, Venus is low in the southwest following sunset throughout the month of November. It's blazing bright and unmistakable if you find a relatively unobstructed view. It appears much higher in the sky for those in the Southern Hemisphere, who'll also be able to easily observe Mercury after sunset this month. What can you see on a night sky map?

The map includes the Moon, stars brighter than magnitude 5, the five bright planets (Mercury, Venus, Mars, Jupiter, and Saturn), and deep-sky objects that can be seen without the use of optical aid. How Do I Use the Interactive Sky Chart to Explore the Night Sky?

Learn sky chart basics in our short tutorial:.
