

What to do if photovoltaic panels accumulate water and leak electricity

Overview

How do you clean a solar panel?

Avoid using strong cleaning agents like detergents or bleach, as they may leave behind residue that attracts more dirt over time. Furthermore, use soft sponges or brushes designed specifically for solar panels to gently scrub away dirt. After cleaning, water streaks can impact panel efficiency.

Can you clean solar panels on a roof?

Cleaning solar panels should be done using only water and a soft broom. Solvents and harsh detergents should NOT be used to wash the surface of solar panels, as this can lead to water ingress and may void the manufacturer's warranty. Note that cleaning solar panels on a roof can be very dangerous, so using a certified solar professional is advised.

How do I know if my solar system is leaking?

Unfortunately, it is very difficult to detect an earth leakage without specialised equipment, and often, even a trained solar professional can have trouble diagnosing an earth fault. Check the solar system performance data on the app and website, if available. Check the solar panels for dirt, leaves, mould, or shade issues.

Can water streaks affect solar panel efficiency?

After cleaning, water streaks can impact panel efficiency. To prevent this, use a long-handled squeegee to wipe the panels dry, similar to cleaning a window. This ensures that water streaks do not distort the sunlight reaching the solar panels. Prioritizing safety in solar panel maintenance is paramount.

What should I do if my solar meter is faulty?

Contact your solar panel installer or a solar panel maintenance professional. If your generation meter is replaced, make sure you get a letter from the installer stating what they have done and that they changed the meter

because it was faulty. The paperwork should also state the model and serial numbers of the old and new meters.

What happens if a solar panel is left alone?

Left alone, solar panels accumulate bird droppings, leaves, dust and water, often called solar blockers. Accumulated solar blockers could reduce energy generated by your solar panels by as much as 25% after two years without cleaning.
