Overview

It is well known that dust deposition and pollutants cause a reduction in the productivity of solar cells, so periodic cleaning of PV panels is required to remove the accumulated dust [27, 28, 29]. How to clean solar panels in a dusty environment?

Electrostatic cleaning Electrostatic cleaning is one of the prominent methods towards solar panel cleaning in a dusty environment. The concept has been developed with a high AC voltage which is applied to the electrodes deployed on the soiled solar panels to remove dust.

How do you clean dust off solar panels?

One of the most common ways to clean dust off solar panels is to spray them with water. But that's a huge waste of water, especially in desert settings, where there are a lot of solar farms. The MIT scientists note in their new study, which is published in Science Advances:.

Can a waterless cleaning method remove dust from solar panels?

Dust that accumulates on solar panels is a major problem, but washing the panels uses huge amounts of water. MIT engineers have now developed a waterless cleaning method to remove dust on solar installations in water-limited regions, improving overall efficiency. Image courtesy of the researchers.

How to remove dust from PV panels?

Sometimes, special cleaning agents are mixed with high-pressure water to enhance dust removal efficiency , , . Additionally, the presence of water helps cool the PV panels , . However, this method is not suitable for semi-arid and arid regions facing severe water scarcity .

What happens if you put dust on a solar panel?

You might wonder what happens on a microscopic level, and here's where it

gets interesting. When dust particles settle on a solar panel, they obstruct the light. This, in turn, reduces the amount of light that is converted into electricity. What's more, heavy dust accumulation can lead to the formation of "hot spots" on solar panels.

Can static electricity keep dust off solar panels?

According to the researchers, static electricity can keep dust off solar panels, and is a much more sustainable solution. And that's important, because as the researchers note, for example, "Dust accumulation of 5 mg/cm² corresponds to almost 50% loss in power output." Effect of dust accumulation on solar panel power output.
