

Which source of energy is not ultimately solar based

Overview

Thus, Nuclear energy is not ultimately derived from Sun's energy. The energy that is required for the fusion of two nuclei is derived from the fission of the nuclei. Ultimately the Sun's energy is not used. Which energy source is not solar based?

As is obvious upon reflection, the Sun powers the Earth. The only major energy source that is not solar-based is nuclear power: energy from the atomic decay of unstable, heavy elements buried in the ground billions of years ago when our planet was formed.

Which energy source is not derived from the Sun?

Practically all energy on earth comes originally from the sun. However, there are exceptions. A power source not derived from the sun is geothermal, which uses heat from deep under the ground. *Nuclear energy is another example, but it was mistakenly included in the original passage.*

Which energy is derived from solar energy?

Nearly all the energy we use is ultimately solar, except perhaps for tidal energy (which is generated mainly by the gravitational pull of the Moon) and nuclear energy. Fossil fuels and biomass fuels are ultimately derived from solar energy.

What is solar energy?

Also known as solar power. Energy that is derived from the radiation of the Sun, which is a sustainable, renewable, non-polluting, and relatively reliable energy source. Nearly all the energy we use is ultimately solar, except perhaps for tidal energy (which is generated mainly by the gravitational pull of the Moon) and nuclear energy.

Which of the following is ultimately derived from solar energy?

Geothermal energy, wind energy, and bio-mass are all ultimately derived from

solar energy. Q No. 1: a Solar Water Heater Cannot Be Used To.

What is the source of solar energy?

Solar energy. The source of Earth's solar power: the Sun. Solar energy is radiant light and heat from the Sun that is harnessed using a range of ever-evolving technologies such as solar heating, photovoltaics, solar thermal energy, solar architecture, molten salt power plants and artificial photosynthesis.

Which source of energy is not ultimately solar based

Most of the sources of energy we use represent stored solar energy

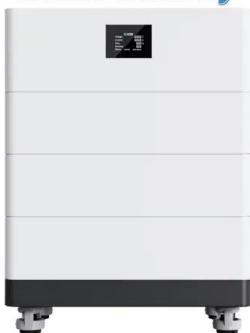

Click here: [point_up_2](#): to get an answer to your question : [writing_hand](#): most of the sources of energy we use represent stored Which of the following sources of energy are not derived from the sun ? Biomass, wind, Ocean thermal energy, Geothermal energy, Nuclear

Which of the following sources of energy is NOT ultimately solar-based

Among the energy sources listed, Tidal energy is the one type that is not ultimately solar-based, as it is primarily influenced by the gravitational pull of the moon. Explanation: Among the following energy sources, the one NOT ultimately sourced from the ...

High Voltage Solar Battery

Most of the sources of energy we use represent stored solar energy

Most of the sources of energy we use represent stored solar energy. Which of the following is not ultimately derived from the Sun's energy? CBSE English Medium Class 10 Question Papers 1278 Textbook Solutions 34526 MCQ Online Mock Tests 19 10846 15

[APES Chapter 13 Flashcards](#)

Study with Quizlet and memorize flashcards containing terms like 1. Which of the following is not an example of a potentially renewable or nondepletable energy source? a) Hydroelectricity b) Solar energy c) Nuclear energy d) wind energy e) Geothermal energy, 2. Renewable energy

sources are best described as a) those that are the most cost-effective and support the largest ...

Most of the sources of energy we use represent stored solar energy

The correct answer is Nuclear energy. Key Points All of the given sources of energy can be ultimately traced back to the sun's energy, except for nuclear energy: Biomass energy is derived from organic matter such as plants and animals, which store the sun's energy through the process of photosynthesis.

Which of the following sources of energy are not derived

Which of the following sources of energy are not derived from the sun ? Biomass, wind, Ocean thermal energy, Geothermal energy, Nuclear fuels, Hydroelectricity, Wave energy, Coal, Petroleum, Tidal energy Q. Most of the sources of energy that we use represent

Energy Mix

Explore global data on where our energy comes from, and how this is changing. How much of global energy comes from low-carbon sources? Around three-quarters of global greenhouse gas emissions come from the burning of fossil fuels for energy. 3 To reduce global emissions we need to shift our energy systems away from fossil fuels to low-carbon energy sources.

[chapter 13: Achieving Energy Sustainability](#)

Which source of energy is NOT (ultimately) solar-based? Wind Biomass Tides Coal Hydroelectricity
Question 5 5. Which of the following demonstrate(s) the use of passive solar energy?
A south-facing room with stone walls and floors
Photovoltaic solar cells

Which of the following sources of energy is NOT ultimately solar ...

Among the energy sources listed, Tidal energy is the one type that is not ultimately solar-based, as it is primarily influenced by the gravitational pull of the moon. ...

Which of the following sources of energy is not (ultimately)

Tidal energy is a non-solar energy source. It generates power by harnessing the moon's and sun's gravitational attraction on Earth's oceans. While solar radiation indirectly influences tides by changing gravitational forces, tidal energy is primarily a function of gravitational interactions rather than direct solar energy conversion.

LFP 280Ah C&I

Most of the sources of energy we use represent stored solar energy

Most of the sources of energy we use represent stored solar energy. Which of the following is not ultimately derived from the Sun's energy? Solve Study Textbooks Guides Join / Login >> Class 10 >> Physics >> >>

Most of the sources of energy we use represent stored solar energy

Explanation: The correct answer is C: nuclear energy. Here is a detailed explanation of why nuclear energy is not ultimately derived from the Sun's energy: 1. Geothermal energy: - Geothermal energy is generated from the heat stored within the Earth's core. - This

Lithium battery parameters

Product capacity: 100Ah
 Product size: 135*197*35mm
 Product weight: 1.82kg 197mm / 7.7in
 Product voltage: 3.2V
 internal resistance: within 0.5

Which of the following sources of energy is not ultimately

The correct option is D Nuclear Energy D: Nuclear energy The energy that is required for the fusion of two nuclei is derived from the fission of the nuclei. Ultimately the Sun's energy is not used. A: Wind energy Wind energy is generated by uneven heating of the

chapter 13

- d) reused or recycled construction materials. e) photovoltaic solar cells as a source of electricity.
4. Do you have a job? Which of the following sources of energy is not (ultimately) solar-based?
 (a) Wind (b) Biomass (c) Tides (d) Coal (e) Hydroelectricity 5. Which

Following sources of energy are not derived from the sun:

Click here?to get an answer to your question Which of the following sources of energy are not derived from the sun ? Biomass, Wind, Ocean thermal energy. Geothermal energy, Nuclear fuels, Hydroelectricity, Wave energy, Coal, Petroleum, Tidal energy.

Which of the following sources of energy is not (ultimately) solar ...

The source of energy that is not ultimately solar-based among the options provided is tides. While most renewable energy sources like wind, biomass, coal (a fossil fuel ...

What are the safest and cleanest sources of energy?

Even then, these estimates for fossil fuels are likely to be very conservative. They are based on power plants in Europe, which have good pollution controls and are based on older models of the health impacts of air pollution. As I discuss in more detail at the end of

Solar energy

3 ???· Energy that is derived from the radiation of the Sun, which is a sustainable, renewable, non-polluting, and relatively reliable energy source. Nearly all the energy we use is ultimately

...

Solar energy

3 ???· Energy that is derived from the radiation of the Sun, which is a sustainable, renewable, non-polluting, and relatively reliable energy source. Nearly all the energy we use is ultimately solar, except perhaps for tidal energy (which is generated mainly by the gravitational

Chapter 8, Nonrenewable and Renewable Energy Video ...

(e) photovoltaic solar cells as a source of electricity. Ashok Prajapati Numerade Educator 01:13 Problem 8 Which of the following sources of energy is not (ultimately) solar-based

Which source of energy is NOT (ultimately) solar-based? (a)

This energy source requires gravitational and kinetic energy and doesn't rely on solar energy; hence, it cannot be considered a solar-based energy source.

APES Chapter 13 Multiple Choice Questions Flashcards

Study with Quizlet and memorize flashcards containing terms like Which of the following is NOT an example of a potentially renewable or nondepletable energy source? a) Hydroelectricity b) Solar energy c) Nuclear energy d) Wind energy e) Geothermal energy, Renewable energy resources are BEST described as a) those that are the most cost-effective and support the ...

Which Source of Energy Is Not Ultimately Solar-Based?

When considering which form of energy is not derived from solar energy, it's important to understand that while many sources stem from the Sun, nuclear energy is not ...

Ch. 13 Flashcards

Study with Quizlet and memorize flashcards containing terms like Which of the following is NOT an example of a potentially renewable or nondepletable energy source? a) Hydroelectricity b) Solar energy c) Nuclear energy d) Wind energy e) Geothermal energy, Renewable energy resources are BEST described as a) those that are the most cost-effective and support the ...

Chapter 13 Flashcards

Study with Quizlet and memorize flashcards containing terms like Which of the following is not an example of a potentially renewable or nondepletable energy source?, Renewable energy sources are best described as, An energy-efficient building might include all ...

APES Chapter 13 & 12 Multiple Choice Questions (Test)

Study with Quizlet and memorize flashcards containing terms like Which of the following is NOT an example of a potentially renewable or nondepletable energy source? a) Hydroelectricity b) Solar energy c) Nuclear energy d) Wind energy e) Geothermal energy, Renewable energy resources are BEST described as a) those that are the most cost-effective and support the ...

Which of the following sources of energy is not (ultimately) solar-based?

Final answer: Tidal energy is the source that is not ultimately solar-based, as it comes from the gravitational pull of the moon and the sun, unlike wind, biomass, coal, and hydroelectricity which all originate from solar energy. Therefore, the correct answer is option C.
