What parts are available for a wind turbine generator?

Our wind turbine generator repair process includes thermographic analysis. In addition to our range of repair and maintenance services, we hold stock to a range of replacement parts including: Generator components. Motor components. Slip Rings. Carbon brushes. Carbon brush holders. A full list of our spare parts and components can be found [here](#).

How does a wind turbine generator work?

The generator is responsible for converting the mechanical energy into electrical energy. Like any machine, wind turbine generators and motors require regular upkeep and repair. This process involves dismantling large components and requires specialist equipment and skilled technicians.

Why do wind turbines need to be replaced?

Replacing the motor and generator in a wind turbine is a critical maintenance task that ensures the efficient operation and longevity of the unit. The motor's job is to convert the kinetic energy from the wind into mechanical energy, which drives the generator.

What services do we offer for wind turbine motors and generators?

We offer a full range of mechanical and electrical services for wind turbine motors and generators, the key services we undertake include: Our wind turbine generator repair process includes thermographic analysis. In addition to our range of repair and maintenance services, we hold stock to a range of replacement parts including:.

How long does it take to replace a gas turbine generator?

Even if all of the major components of a turbine need to be replaced (and that would be highly unusual), it is often only a two-day job—unlike the weeks required for a complete overhaul of a traditional generator. Of course, there

are decades of service records, procedures, and maintenance strategies in place for steam and gas turbine generators.

How long does a wind turbine generator last?

According to studies surveying traditional industrial and utility applications, motors and generators over 100 kW experience service lives from 25 to 38 years, so at least 20 years for a wind turbine generator does seem a reasonable goal.
