Mars and Jupiter

Students explore Mars and Jupiter, the fourth and fifth planets from the Sun. They learn some of the unique characteristics of these planets. They also learn how engineers help us learn about these planets with the design and development of telescopes, deep space antennas, spacecraft and planetary rovers.

[Jupiter vs Mars \(Similarities And Differences\)](#)

Like Earth and the other terrestrial worlds, Mars does have an atmosphere, certainly more visible than that on Mercury but, when compared to Earth's it is merely 1% of its volume. As a result it is more susceptible to larger debris striking its surface and is unable to trap in too much heat either.
