

Yuntaihuangfeng Power Generation

Overview

Can a self-boosted rotational electrostatic discharge Teng generate ultra-high peak output power?

In this study, a self-boosted rotational electrostatic discharge TENG (SRE-TENG) is proposed as a simple and innovative strategy for ultra-high peak output power generation of rotational TENGs.

What is a 20 kW SOFC power-generation unit?

A 20-kW SOFC power-generation unit is being developed to verify technology feasibility. It consists of four stack towers. Each stack tower consists of 4 × 1–1.5-kW stacks, the power output of which is dependent on the fuel type and operating conditions. The maximum power output of the unit is expected to be 20 kW when using syngas as fuel.

What is a 500 kW IGFC power-generation system?

The conceptual design of a 500-kW IGFC power-generation system is shown in Fig. 12. The system consists of 5 × 100 kW-level subsystems which can be controlled separately, and the generated DC power is converted to AC power. There are 5–6 SOFC modules within each subsystem, which are connected electrically in parallel.

How can Teng be used as a high-performance power supply?

Therefore, enhancing the total charge transfer and diminishing the output impedance are the keys for TENG to serve as a high-performance power supply. In this work, we develop an opposite-charge-enhanced transistor-like TENG (OCT-TENG) that is capable of delivering ultrahigh instantaneous power density over 10 MW/m².

Who is universal energy Zhejiang?

11.17 - Establishment of Universal Energy Zhejiang, marking the business launch of investment and construction in commercial solar power plants.

On November 11, 2015, the "ON" stages of the Oct-Teng power generation system were established in Universal Energy was established in November 2015.

How much power does the Oct-Teng produce?

Given the whole power generation of the OCT-TENG is dominated by the output from the "ON" stages, for a large range of load resistance from 22Ω to $10 \text{ M}\Omega$, the average power densities keep roughly constant and all above $450 \text{ mW}\cdot\text{m}^{-2} \cdot \text{Hz}^{-1}$.
