

Zhao Jing Photovoltaic Bracket

Overview

What is a new cable-supported photovoltaic system?

A new cable-supported photovoltaic system is proposed. Long span, light weight, strong load capacity, and adaptability to complex terrains. The nonlinear stiffness of the new cable-supported photovoltaic system is revealed. The failure mode of the new structure is discussed in detail.

What is a fixed mounted PV system?

Fixed mounted PV systems are the traditional and most widely used PV system. They are usually mounted on the ground and building roofs. Ground-mounted PV systems have been widely used in large-scale solar farms in deserts, open areas and mountains. These systems are cost-effective and easy to construct.

Can a cable-supported PV system reduce vertical displacement?

Recently, the authors (He et al., 2020) proposed a new cable-supported PV system using three cables and four triangle brackets to form an inverted arch to reduce the vertical displacement of the PV modules.

What are roof-mounted PV modules?

Roof-mounted PV modules are installed on domestic roofs, industrial roofs or commercial roofs. Some of these modules are treated as building materials, such as roofs and external walls.

What is a supporting cable structure for PV modules?

Czaloun (2018) proposed a supporting cable structure for PV modules, which reduces the foundation to only four columns and four fundaments. These systems have the advantages of light weight, strong bearing capacity, large span, low cost, less steel consumption and applicability to complex terrain.

What are the characteristics of a cable-supported photovoltaic system?

Long span, light weight, strong load capacity, and adaptability to complex terrains. The nonlinear stiffness of the new cable-supported photovoltaic system is revealed. The failure mode of the new structure is discussed in detail. Dynamic characteristics and bearing capacity of the new structure are investigated.
