What is the capacity potential for large-scale solar PV in China?

4. Discussion This work reports that the total capacity potential for large-scale PV in China is 108.22 TW with 150.73 PWh annual solar PV generation (implying an average capacity factor of 15.9), which can bring 150.28 billion tones of CO₂ emission mitigation caused by coal-fired power generation.

Will large-scale PV deployment contribute to China's net-zero electricity system by 2050?

The contribution of large-scale PV deployment to China's net-zero electricity system by 2050. As China has pledged to become carbon neutral by 2060, electrifying its energy sector is no doubt one of the priority measures to support the transition towards a more sustainable and decarbonized energy system.

What are the major solar power technologies currently available in China?

The major solar power technology currently available is the solar PV system, in which sunlight is directly converted into electricity via photovoltaic effect. The PV industry in China entered its period of rapid development during the 21st century because of the significant increase in global demand for PV products.

Can China achieve a net-zero electricity system by 2050?

We show that it is feasible for China to fulfill a net-zero electricity system by 2050, through the installation of 7.46 TW solar PV panels on about 1.8% of the national land area (mostly in western China) with a total capital investment of 4.55 trillion USD in the next 30 years.

How will China's solar PV industry move toward a healthy and orderly development track?

The PV industry in China is expected to move toward a healthy and orderly development track by improving entry threshold to curb excessive production capacity. 4.2. Specific implementations in relevant fields The latest 12th Five-Year Plan for Renewable Energy Development in China proposed a new development goal for its solar PV industry.

Is solar photovoltaic power possible in China?

Some previous research has evaluated the geographic and technical potential of solar photovoltaic power in China (;), in which only some basic geographic and climatological factors such as land-use type, slope, and solar radiation are considered.
